

PDA CLINICAL WINDOW

Obtain real-time patient information from one or many disparate systems, and display on wireless PDA and cell phone devices for physician mobile access, anytime, anywhere. No synch'ing!

FUNCTIONALITY

- ❖ Quick-access tools:
 - ❖ MD-configurable critical indicators, triggered against vital signs and lab values, display on physician list.
 - ❖ MD-configurable flow sheet for access to trended labs and vitals most important to that physician.
 - ❖ Rounding report - summary of all recent data for a patient within the last 24-48 hours.
- ❖ Physician census ("mine and group), nurse unit census, and "covering" physician census.
- ❖ Clinical results: labs, radiology, transcription.
- ❖ Vital signs, input & output
- ❖ Allergies, height and weight
- ❖ Medication profiles; Orders
- ❖ When used with New Age's *Patient Safety Clinical Alerts* module, enables physician to receive and acknowledge clinical alerts, such as panic lab results.
- ❖ *Physician charge capture* is added module enabling physician to capture diagnosis, services, and procedures performed at the hospital and transmit for billing.
- ❖ Multi-facility
- ❖ Demographic information including face sheet, diagnosis, and insurance.
- ❖ Images, such as radiology images, document images, photographs
- ❖ Portal to additional data, such as drug references
- ❖ Use as an "uptime" app, when your systems are "down"
- ❖ Architected for data input, i.e. vital signs capture, 100,000 Lives data collection, etc.

FEATURES

Wireless: No syncing required; physicians not limited to only their patients.

Physician Friendly: Simple web browser view with stylus driven navigation, no training

Quick install: Usually 90 days

Vendor Independent: Data from HL7 feeds or other means, from any source system: McKesson, Cerner, Siemens, Meditech, Lawson, etc. Non-invasive integration usually requires no cooperation from other vendors.

PDA device independent: Functions on windows CE or palm OS (blazer browser 5.0 and higher)

Secure: No data is stored on the mobile device, so patient information cannot "walk" out of your facility. Information is encrypted via SSL. Fully audit trailed.

Authentication: Use New Age's built in authentication, or authenticate via Microsoft Active Directory or biometrics.
