

PDA CLINICAL WINDOW

Obtain real-time patient information from one or many disparate systems, and display on wireless PDA and cell phone devices for physician mobile access, anytime, anywhere. No synch'ing!

FEATURES

Wireless: No syncing required; physicians not limited to only their patients.

Physician Friendly: Simple web browser view with stylus driven navigation, no training

Quick install: Usually 90 days

Low Cost: Only one license fee per facility/unlimited users per facility.

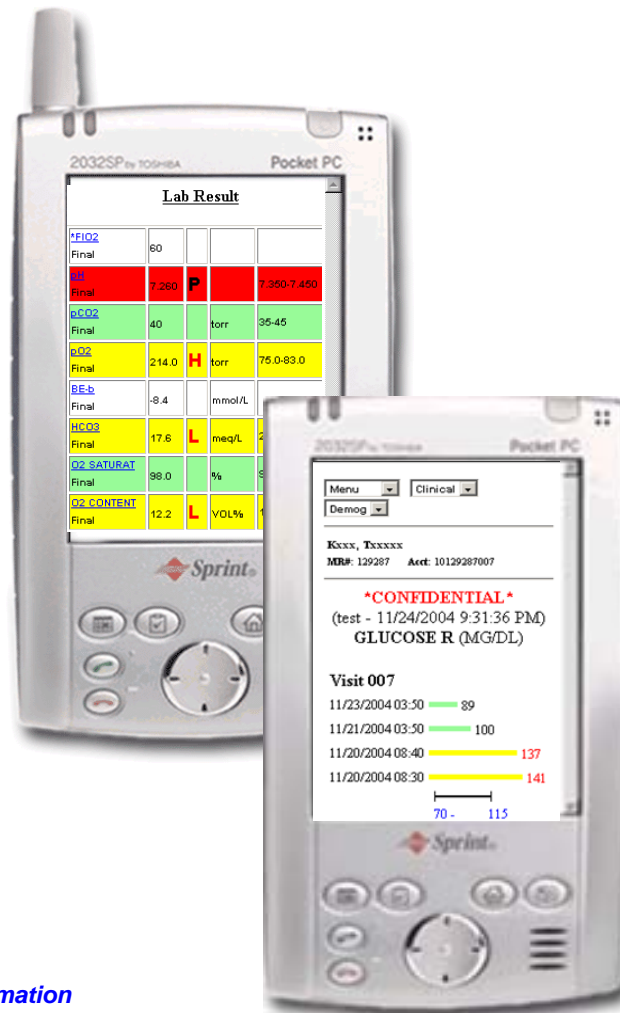

Vendor Independent: Data from HL7 feeds or other means, from any source system: McKesson, Cerner, Siemens, Meditech, Lawson, etc. Non-invasive integration usually requires no cooperation from other vendors.

PDA device independent: Functions on windows CE or palm OS (blazer browser 5.0 and higher)

Secure: No data is stored on the mobile device, so patient information cannot "walk" out of your facility. Information is encrypted via SSL. Fully audit trailed: log of every session by username, date, time, and patient record.

Authentication: Use New Age's built in authentication, or authenticate via Microsoft Active Directory or biometrics.

Accessing, integrating and leveraging information to create specialized windows which improve communication, patient safety and health care processes.

FUNCTIONALITY

- ❖Presents physician's patient list, nursing unit census and Physician group census(s), including ability of residents and/or "covering" physicians to associate themselves with a group when needed.
- ❖Provides clinical data including lab results, radiology reports and transcription.
- ❖Vital signs, input & output
- ❖Medication profiles
- ❖Receive and acknowledge clinical alerts, such as abnormal/panic lab results.
- ❖Physician charge capture is added module enabling physician to capture services/procedures performed at the hospital and transmit for billing. When used by residents, serves also as an "experience log" documenting procedures and services performed by the resident.
- ❖Demographic information including face sheet, allergies, diagnosis, and insurance.
- ❖Images, such as radiology images, document images, photographs
- ❖Portal to additional data, such as drug references
- ❖Multi-facility
- ❖Use as an "uptime" app, when your systems are "down"
